

Pull Request Guidelines

This page contains guidelines for GitHub Pull Request Create/Merge activity.

When a pull request is created for either **dev**, **qa2**, **qa** and **qa-cyb-aut branch**, following checks are executed automatically and if any of them fails, pull request will be rejected and qa resource needs to rectify issues. These checks are executed on the last commit of the pull request.

- **PR Check**

Opening/Adding New Commit: Title of Pull Request should contain Jira issue ID. You can add description of Pull Request in title if you want but it is mandatory to **add Jira issue ID** for which Pull Request is created. This is required to post Pull Request link on Jira issue (in Jira) web link section by a automated process for traceability purpose in future.

Below is given Sample pull request screenshot. This is needs to be taken care by qa resource while raising PR. Jira issue ID should be mentioned in **ORD-#** format highlighted in blue in screenshot. **In case Jira issue ID is not found in PR title, "Title Check" will be failed and pull request will be rejected.**

This is a mandatory check

ORD-30364: Fix of Sanity Scripts #393

 **Open** **shisingh** wants to merge 2 commits into **qa** from **ORD-1234**

 Conversation **0**  Commits **2**  Files changed **0**

Screen 3: After PR check being completed

- **Build Check**

Opening/Adding New Commit: This check checks weather your latest commit is able to build/compile. If build Check fails, qa resource needs to click on "Details" link to see the logs for build failure which will re-route them to Jenkins.

This is a mandatory check

Screen 4: After Build check being completed

- **Mergeable Check**

Opening/Adding New Commit: This check is used to check if your latest commit is having any conflicts or not. If build Check fails, qa resource needs to click on "Details" link to see the logs for build failure which will re-route them to Jenkins.

This is a mandatory check

• Custom Check

Opening/Adding New Commit: This check is used to add the record of your successful execution of test cases that are going to be delivered in the latest commit.

To create a check of your test case on latest commit use the below mentioned jobs:

1. Test_Job_Status_1
2. Test_Job_Status_2
3. Test_Job_Status_3
4. Test_Job_Status_4
5. Test_Job_Status_5

5 jobs are created so that it can be accommodate all the team members.

Run the job with below configuration:

Project Test_Job_Status_1

This build requires parameters:

waitTime	<input type="text" value="20"/>
browser	<input type="text" value="chrome"/>
applicationURL	<input type="text" value="https://ordering.qa.elementfleet.com/login"/>
applicationBOURL	<input type="text" value="https://ordering-backoffice.qa.fleet.ad/login"/>
suiteTemplate	<input type="text" value="\${project.basedir}/src/test/resources/Sanity/Sanity_Codes_Tables.xml"/>
orderingTestDataFilePath	<input type="text" value="/src/test/resources/TestData/OrderingTestData.csv"/>
foUserName	<input type="text" value="AtestSupr"/>
boUserName	<input type="text" value="-"/>
GIT_BRANCH	<input type="text" value="qa"/>
SLAVE_LABEL	<input type="text" value="ordering"/>
commitSHA	<input type="text" value="2282696d186837c793abc9e4fa4f0cbeb3a6aa7a"/>

Build

Screen 5: Sample job execution details

Make sure you add latest complete commit id as the status will be added to the latest commit id.

Latest complete commit id can be taken by clicking on the latest commit link and then in the URL section complete commit id will be displayed.
